

LOMA

Local Operator Matching Assistant

Turning local know-how into trackable tourist visits.

Demo Day • Phuket

It starts with a question

**“Where should we eat tonight —
somewhere local, not a tourist trap?”**

— a guest, 5 minutes after check-in

**The front-desk staffer actually knows
good places.**

But they freeze:

no time · can't recall names · afraid to send
the guest somewhere wrong.

So they name the same tourist spot everyone
does — or say “just Google it.”

This moment repeats thousands of times a day across Phuket.

Two sides — both losing at the same moment

Local knowledge is trapped

Front desk, drivers, guesthouse owners, guides all know great local spots — but that knowledge never reaches the tourist at the second they're deciding.

Local SMEs are invisible

Wonderful small restaurants, cafés and community experiences can't out-advertise or out-review the tourist-trap chains on Google.

The match never happens — exactly when it matters most.

LOMA closes that gap

A trusted local-recommendation layer for Phuket tourism.

Staff app

Front-line staff find & share 3 good local picks in under 30 seconds.

Tourist card

Opens from a link or QR — no app, no login. English & Thai.

Impact dashboard

Every recommendation is tracked to a real, confirmed local visit & spend.

Three layers • one job: get the right local pick to the tourist at the deciding moment.

One simple loop

Every share carries a referral code — so the loop is measurable end to end.

We don't out-review Google. We out-trust it.

GOOGLE MAPS

400 gameable reviews and decision paralysis. Great for search — not for “tell me where to go, now.”

LOMA

A short, vetted list, hand-picked by a local you trust. Ranked by trust & locality — never popularity or payment.

The retention risk — solved

Province events, weekly

Festivals, markets, temple fairs, boat races — things no one can memorize.

Curated by BDI

Every event vetted, location-pinned and always fresh.

One-tap share

Send an event to the tourist card via the same 6 channels (QR, LINE...).

Habit, not memory

Staff open LOMA daily for what's new — even knowing every restaurant.

The reason staff keep opening LOMA — long after they know the restaurants.

Built for four sides of the destination

Demand partners

Hotels · hostels · guesthouses · rentals · drivers — they recommend.

Tourists

Get a trusted pick instantly — no app, no login, no paralysis.

Local providers

Food · cafés · massage · community experiences — they get real leads.

Destination / BDI

See measurable local economic impact, not vanity metrics.

A B2B2C model: partners deliver, providers benefit, tourists trust, the destination measures.

The demand is already here

8.65M

passenger arrivals to Phuket

2024 • +23% YoY (C9 Hotelworks)

*\$497.5B in 2024 tourism revenue — #1 in Thailand —
and every visitor, at some point, asks: “where should
we go?”*

Top source markets • 2024 (approx., millions)

Not a slide — a working system + real data

Clickable prototype

All four roles work, end to end:

- Staff app — real filters, share, favourites
- Tourist card — link/QR, self-serve, feedback
- Provider portal — leads, confirm, private feedback
- Admin — impact, verification, integrity checks

76 verified providers

Community-based tourism, ready to seed from BDI open data

1,373 recruitment leads

Real Phuket businesses scraped & filtered — 495 top-priority

3 MVP categories

Local Food • Massage & Wellness • Community Experience

Trust by design — and hard to game

Verified admission

Identity + locality checked before a business can be recommended.

Ranked by trust

By locality, quality & readiness — never volume or payment.

Reviews stay private

Feedback helps the recommender & provider — never a public score to pump.

Fraud checks

Self-dealing (shared-owner) & lead-concentration detection in admin.

We remove the reward for spamming — so there's nothing to spam for.

Measurable local economic impact

Recommendation

Card open

Contact / directions

Confirmed visit

Reported local spend

For the first time,
the destination can answer:

1 recommendation
→ **1 confirmed visit**
→ **real \$ into a local**
SME.

Estimated local economic impact

1 hotel

recommends about 10 tourists a week to local spots.

× ฿300 each

average spend at a small local business.

= ฿3,000 / week

flows into local SMEs — from a single hotel.

× 100 hotels

≈ ฿15.6M a year of local economic impact.

Illustrative estimate — Phuket earns ฿497.5B/yr across 42,598 local SMEs.

A focused 90-day Phuket pilot

Who

10 hotels & hostels + 30 verified providers, in Old Town + Rawai.

What

Measure the full loop:
recommendation → confirmed visit
→ local spend.

Success

Target confirmed visits, ฿ local spend, and partner adoption.

Small, measurable, bounded — a pilot the committee can actually fund.

What we're looking for

A pilot blessing + introductions

to a handful of hotels and local communities to start.

Honest feedback on the model

especially where you'd expect it to break.

Support to run the 90-day pilot

so we can prove real local impact with real numbers.

LOMA

We don't out-review Google. We out-trust it.

Trusted local recommendations · measurable local impact · for Phuket.

Thank you — let's talk.
